CLINIQ (CLINICAL OS) • CO-FOUNDER BRIEFING & STRATEGY DOCUMENT

Product Roadmap, Pricing & Partner FAQ

Prepared for Co-Founders in Marketing, Clinical Operations, Medical Leadership & Growth

Live Platform: https://clinical-os.onrender.com | Currency Standard: INR (Rs.)

PART 1 • LIVE PLATFORM TODAY

Where We Are Today (100% Built & Live in Production)

Cliniq is an AI-assisted Dermatology Clinic Operating System built for Indian skin & hair practices.

- **1. Zero-Typing QR Walk-In Queue**
  Patients scan a QR code at the reception desk on their own smartphone to enter their name, age, mobile number, and skin concern. They appear immediately in the doctor's live queue with zero front-desk typing.
- **2. 60-Second Digital Consultation & Rx Pad**
  Pre-loaded with Indian dermatology diagnoses, medicines, dosages, and aesthetic procedures (Chemical Peels, Laser Toning, PRP, Hydrafacial) so doctors finish charting in under 60 seconds.
- **3. AI Pre-Visit Brief & Clinical Assistant**
  Before a repeat patient walks into the cabin, the doctor sees a 3-bullet summary of their last visit, active medicines, and allergy warnings so no context is ever missed.
- **4. AI Skin Image Analyzer & Visual Progress Comparison**
  Doctors snap a clinical photo via phone QR or webcam; AI highlights visual skin patterns and tracks Day 0 vs. Day 14 improvement side-by-side—turning sceptical patients into loyal repeat visitors.
- **5. Live INR (Rs.) Billing & Practice Ledger**
  Every consultation fee and procedure cost is tracked in Indian Rupees (INR / Rs.) with daily revenue, Monthly Recurring Revenue (MRR), procedure vs. consultation mix, and 1-click CSV export for the clinic CA.
- **6. Trilingual Interface (English, Hindi & Punjabi)**
  Reception staff and doctors can switch the entire workspace between English, Hindi, and Punjabi in one click.

PART 2 • 12-MONTH EXECUTION PLAN

Phased Product Roadmap (Months 1 to 12)

Prioritized to maximize clinic stickiness first, then expand clinic revenue, then scale to multi-branch chains.

Phase 1 (Months 1–3): Clinic Adoption & Frictionless Daily Use

- **Automated WhatsApp Prescription & Follow-Up Delivery**
  As soon as the doctor signs a consultation, the patient automatically receives their digital PDF prescription, medicine schedule, and next follow-up reminder directly on WhatsApp.
- **Dedicated Receptionist Login & Front-Desk Mode**
  A restricted staff login where receptionists can manage walk-ins, appointments, and fee collection without seeing private clinical notes or full clinic profit analytics.
- **Custom-Branded Print & Letterhead Templates**
  1-click printing tailored to the clinic's existing physical letterhead pad (custom top/bottom margins, clinic logo, and digital signature stamp).
- **Voice-to-Prescription (Dictation Mode)**
  Doctors speak naturally ("Tab Doxycycline 100mg twice daily after meals for 14 days") and Cliniq auto-fills the structured prescription table.

Phase 2 (Months 4–6): Clinic Revenue & Inventory Expansion

- **In-House Pharmacy & Cosmeceutical Inventory Tracker**
  Most dermatologists earn 40–50% of their profit from in-clinic sunscreens, serums, and medicated creams. Prescribing an item will automatically deduct stock and alert the clinic before high-margin items run out.
- **Multi-Session Aesthetic Package Tracker**
  Track 6-session Laser Hair Reduction or 4-session PRP packages (e.g., "Session 3 of 6 completed — Rs. 18,000 paid, Rs. 6,000 balance due") with automated reminders.
- **ABDM (Ayushman Bharat Digital Mission) Readiness**
  Optional ABHA Health ID linking so partner clinics stay ahead of upcoming Indian digital health standards.
- **Regional Language Expansion**
  Adding Marathi, Tamil, Telugu, Bengali, and Gujarati for pan-India clinic onboarding.

Phase 3 (Months 7–12): Multi-Clinic Scale & Patient Retention

- **Multi-Branch Chain Dashboard**
  A single owner view for dermatologists running 2–10 clinics to compare daily footfall, procedure revenue, and doctor performance across branches.
- **At-Home Patient Recovery Check-In Link**
  Patients receive a Day-7 link to upload a quick progress selfie from home; the doctor reviews it in 10 seconds and approves continuation or books an early visit.
- **Indian Skin Tone (Fitzpatrick III–VI) Benchmark Library**
  Specialized clinical reference library calibrated specifically for Indian skin pigmentation, melasma, acne scarring, and fungal dermatoses.

PART 3 • SAAS + USAGE REVENUE MODEL

Monetization & Pricing Tiers (100% Standardized in INR)

Low-friction SaaS subscription paired with high-margin AI Scan Top-Up packs collected centrally.

- **1. Starter Tier (Free Trial) — Rs. 0 / month**
  Full EMR, Walk-In QR Queue, Digital Prescriptions, Revenue Ledger + 5 Free AI Skin Scans to experience the value risk-free.
- **2. Clinic Pro Subscription — Rs. 3,999 / month (per clinic)**
  Unlimited patients, unlimited digital prescriptions, full INR billing & CA export, priority support + 150 AI Skin Scans / month.
- **3. Instant Scan Top-Up Pack — Rs. 999 one-time add-on**
  Adds +100 AI Skin Scans immediately (never expires). Protects our AI unit economics while scaling revenue with heavy users.
- **4. Multi-Clinic Enterprise (Phase 3) — Rs. 9,999+ / month**
  Multi-branch analytics, custom WhatsApp business branding, dedicated account manager + 500+ AI Skin Scans / month.

PART 4 • CO-FOUNDER & PARTNER FAQ

Frequently Asked Questions (Non-Technical Guide)

Clear answers for Marketing, Sales, Medical Advisors, and Operations Co-Founders.

> **Q: Indian doctors are super busy and prefer pen-and-paper. Why will they use Cliniq?**
> We never ask doctors to type long paragraphs. First, the patient fills their own details via the reception QR code. Second, common Indian dermatology medicines and procedures are 1-click chips. Third, the "Day 0 vs Day 14" visual photo comparison helps doctors convince patients to buy high-ticket aesthetic procedures (Rs. 3,000–Rs. 15,000+ per session)—so Cliniq directly makes the doctor more money.

Q: What if the clinic receptionist is not tech-savvy or only reads Hindi/Punjabi?

Cliniq has built-in 1-click language switching between English, Hindi, and Punjabi. A receptionist only needs to point patients to the Walk-In QR code or click a single button to check them in.

Q: How are we different from generic platforms like Practo or HealthPlix?

Generic EMRs are built for general physicians (fever, BP, diabetes) and feel cluttered for skin clinics. Cliniq is purpose-built for Dermatology & Aesthetics: visual lesion tracking, Day 0 vs Day 14 photo comparisons, procedure vs consultation revenue split, and AI skin triage.

Q: Why do we cap AI scans and sell Top-Up packs instead of making AI unlimited for free?

Every high-resolution AI skin image analysis costs us cloud compute. By giving 5 free trial scans, bundling 150 scans in Clinic Pro (Rs. 3,999/mo), and charging Rs. 999 per 100 extra scans, our gross margins stay above 80% even when a clinic scans 50 patients a day.

Q: Where does subscription and top-up money go? Does it go into one person’s personal bank account?

No. All clinic payments are collected through a centralized startup merchant account (Razorpay / Stripe business account linked to our company current account), giving all co-founders transparent dashboard access, automated GST invoicing, and clean audit trails.

Q: Is Cliniq legally replacing the dermatologist or prescribing medicines on its own?

Strictly NO. Cliniq is positioned as a "Clinical Decision Support (CDS) & Practice Management System." Every AI insight is labeled for clinician review, and no prescription is finalized until the registered doctor clicks "Sign & Complete." This keeps us compliant with National Medical Commission (NMC) and CDSCO guidelines.
